

Memory Screening

A Closer look at Memory Changes

A **Memory Screen** is a wellness tool that helps identify possible changes in memory and cognition; it creates a baseline of where a person is at so that future changes can be monitored.

It's **Free** and only takes
10 minutes!

Call for an appointment:

2nd Tuesday morning of each month

*Alternate times available upon request

Early detection is important

Treatment is possible. Stay in control of your life.

Get immediate results!

You may keep them for yourself and, if you request, we will fax them to your physician.

Early detection is important!

Just as blood pressure, cancer, diabetes, or stroke screening contribute to prevention and better treatments, so does a **Memory Screen**.

Treatment is possible!

Some types of dementia are reversible, like those caused by nutritional and vitamin deficiencies, depression, thyroid issues, and more.

Knowledge means you have more control!

Dementias that are not reversible can often be treated with medications that could slow down the progress and preserve quality of life for a longer period of time.

For more information or to schedule your Memory Screen, call the ADRC today.
