

## EXCERPTS

### **NATURE IS SPEAKING, ARE YOU LISTENING?**

Nature is speaking to us in the form of unprecedented climate change. As inhabitants of this planet we need to retune our perception to hear her message and find the strength to act

We address how Nature is communicating major imbalances through environmental catastrophes. We then challenge ourselves to begin thinking deeper about our contribution to the current environmental challenges we face and how can we all better listen to the message that Nature is sending,

Once we are truly listening to Nature's message we become aware of our path forward. By working together we find encouragement and hope in the myriad opportunities around us to take positive steps that will begin to shift the tides in a regenerative direction.

**OVER THE NEXT SIX WEEKS, WE INVITE YOU TO VIEW SHORT VIDEOS OF NATURE SPEAKING TO US.**

In the end, we invite you to share ways you and we can join to respond to Nature.
