**General Notes**

Drawing created February 2021 by Ryan Lampe (Lampe Design, LLC) for St. Stephen Catholic Church from which copies can be made for use by cemetery personnel. It was created from a combination of:
- A drawing of unknown date and drafter, believe late 1960's, created from the 1937 drawing for the preservation of that document.
- Additional information provided by St. Stephen Catholic Church.

Effort was taken to faithfully and accurately reproduce the information provided to the best of the drafter's ability. It however shall not be interpreted as a detailed official survey of the current property as site verification or measurements where not conducted to that extent in the creation of this drawing. As example immediately notable differences at the time of this drawing creation include:
- Size of existing drive circle significantly smaller than this drawing indicates.
- South Howell Ave appears to have been widened with a sidewalk added immediately adjacent to the west most burial plots.
- Site elements not at all reflected in this drawing such as numerous mature trees.

**Note to Future Drafters:**

Based on how the original drawing was drafted:
- All the vertical burial lot lines and dimensions would be parallel to the east and west property lines.
- While the horizontal burial lot lines and dimensions would be parallel to the north and south property lines.

This drawing has been created following the original in this regard. If this is true, since the original lines are not at a perfect 90deg to each other and hence misalignments, then all the lot corners would be approximately 6" different across the entire property. As it is not certain whether the original document was processed or prepared by hand, no effort was made to adjust for the misalignment existing in the original. Note that these misalignments may have been lost over time as new rows of burials were added to the cemetery. However, based on the current data set, the drafter has not determined if there have been any site changes since this drawing was made in 2021. As a result, any measurements taken in the field may not match what is represented on this drawing and may need to be adjusted accordingly.

**Drawing Key Notes**

The following are observations made by the drafter in the creation of this document regarding differences in measurements indicated in the original documentation and this one. These may or may not be significant enough to warrant separate plotting, but it was felt important to note for any future individuals working with both this drawing and the original documentation.

1. Block 1 Sec 14, the total length north to south of this section based on the original drawing dimensions would be 105'-0" but it is also drawn as aligning with all sections west which have a total length 106'-6". The graves already used account for the extra 1'-6" so has just shown it as a dashed line at the southern edge.

2. Original drawings call this dimension out as 5'-0", but based on the total of the individual lots and the overall site length, there is a 2'-6" difference across the entire property. While multiple factors contribute to this difference across the entire property, some of which are not necessarily significant, the drafter wanted to make note of them for any future individuals working with both this drawing and the original documentation.

3. Course lines where not represented on this drawing at all. It was determined that the accuracy of any measurements would be questionable as they would be representing the original data set which the drafter was not able to verify.
