<ol> <li>Store at room temperature.</li> <li>Shake the MDI for 5 seconds before each u</li> <li>Prime the MDI before the first use or when product's patient information sheet for MD usually involves pressing down on the med one or more puff of medication. Discarding contains the labeled amount of medication.</li> <li>Keep track of metered inhalation puffs used number of metered inhalation puffs available metered inhaled puffs available is listed on There are usually 200 puffs in an MDI.</li> <li>Ask family for a new MDI when all labeled.</li> </ol>	not used every day. Follow the I specific priming instructions. Priming ication canister to discard into the air puffs makes sure the next puff inhaled I. Subtract the number used from the le listed on the label. The number of the medication canister or on the box.						
<b>MDI and Aerosol Solution Potential Adverse Reaction:</b> Headache, shakiness, fast heart rate, nausea. Call parent with 1) student report of symptoms that interfere with schoolwork or activity 2) increase in side effects 3) frequent usage (2 times a day for 3 days).							
We have instructed the patient and family in the proper use of the quick-relief medications. It is my professional opinion that the student: should be allowed to carry and self administer the inhaled medication should <b>not</b> carry and self administer the inhaled medication. The medication should be stored and administered by designated school personnel.
