Since snack will be provided, please list any allergies your child has \_\_\_\_\_

### **Martial Arts**

Lisa Susko, President at Championship Martial Arts 716.

As a martial arts instructor with extensive experience training kids, there is nothing better than seeing them grow firsthand. It's about developing confidence, discipline, character, focus and respect. With every class we teach, your kids are growing in mind, body and character. That's because martial arts provides instant positive feedback. Through learning to focus on the core moves, they develop discipline and respect. They can instantly see and feel a difference, making them destined to build confidence, self-awareness and self-respect. Best of all, it's FUN!

### **Future City**

St. Peters will again be participating in the Future City Competition that takes place in January of 2020. Students in grades 6th, 7th, and 8th grade are invited to be a part of this exciting STREAM challenge. They will complete a city simulator online, write an essay about their future city, and create a city model to present to judges at competition.

This year's theme is "Clean Water: Tap into Tomorrow". This club challenges students to choose one potential threat to their future city's clean drinking water. They will then create a resilient water supply system with innovations that they can design to help their water supply system withstand the specific threat or stressor.

Future City is from **3:15-4:15**. Parents are asked to park in the parking lot since the other clubs are dismissed at 4:00 to the car loop. Future City will continue each Tuesday until the competition in January.

### **Art Seasonal Crafts**

Fall is in the air! As we enter this new season of apple picking, hayrides and pumpkin patches, we will recognize the changes around us as inspiration for crafts. In this club we will create seasonal crafts that can be displayed as decorations or given as Thanksgiving or Christmas gifts! Either way, these one of a kind projects are sure to be a hit!

### **Superpower Senses**

This club focuses on exploring the 5 senses through picture books and sensory experiences. During this academy, we will explore the 5 senses through reading, ELA, and science. Students will lead through exciting and unusual adventures where characters explore a sense. Students, using age-appropriate writing prompts, will write about their experiences with their Superpower Senses. Exploration of each sense will conclude with the science behind how sounds, smells, taste, touch, and sight are transmitted to us and received using our Superpower Senses!
