My child _____ will participate in _____ club.

Parent Signature _____

Since snack will be provided, please list any allergies your child has _____

Martial Arts

Lisa Susko, President at Championship Martial Arts 716.

As a martial arts instructor with extensive experience training kids, there is nothing better than seeing them grow firsthand. It's about developing confidence, discipline, character, focus and respect. With every class we teach, your kids are growing in mind, body and character. That's because martial arts provides instant positive feedback. Through learning to focus on the core moves, they develop discipline and respect. They can instantly see and feel a difference, making them destined to build confidence, self-awareness and self-respect. Best of all, it's FUN!

CSI

Solve mysteries using the science of forensics in CSI Club. Students will observe trace evidence, investigate fingerprinting, extract DNA, create transfer patterns, and examine fiber and handwriting evidence to master problem solving like a true crime scene investigator. We will use videos and comparisons on crime scene evidence (all age appropriate) and use our skills to see what others don't.

Great for grades 5-8.

Kitchen Chem

Kitchen Chem is an introduction to food preparation and cooking, it is a way to reinforce and teach subjects like Science, Math, and Reading while cooking! Students will not only learn how to achieve accurate measurements but learn why it is so essential to the outcome of a recipe. Kitchen Chem is designed to develop a love of cooking and an appreciation for delicious food through a variety of cooking/baking techniques. Kids will cook and eat their creations then they'll be able to take the recipes home so they can make them again!!

Tech Wars: Bridge Building

Objective of Competition: Design and engineer a bridge using 1/8" x 1/8" wood members to hold up to 100 lbs. over a 12-inch span. Teams will use the engineering design process to complete this challenge with the guidance and support of teachers and professionals in the engineering field. If successful, teams can register to compete at Tech Wars 2020 – Erie County Community College this spring!

Play Props

Play Props is a club for designing and creating custom props and setting pieces that will be used in the upcoming St Peter RC musical, Frozen. Students will utilize their time and artistic talents to make our school musical one to be remembered! Whether you were born to be in the spotlight or not, you can play a leading role in the behind the scenes development of the show. This club is open to students in grades 3rd-5th. We look forward to seeing you!

Easter Crafts

Join us for some fun Easter art! We will be making Ukranian Eggs (using wax and dye to create beautiful designs on eggs), a wooden sign for Easter using your own personalized vinyl stencil, and if there's time "Cascarones" - Mexican confetti eggs.

Little Bits: Mix it Up!

Let your creative side shine as we dabble in the many methods of painting, investigate the different kinds of paint, and explore the science involved. You will be introduced to famous artists and their type of painting, and connect the art of painting to Literature, Religion, and much, much more!
