

Uganda well #12 Osupa Village

The well is located in the Osupa Village in Pallisa district Uganda. The nearest town is Pallisa. The only water that the community had was a hand dug well that you see in the picture number one which was never sufficient, especially in the dry season, forcing people to travel great distances to find often contaminated water. With funding from One Family International (OFI), HMI was able to drill the well deeper and protect it better with a hand pump. This project was requested and supervised by our country coordinator for Uganda, Fr. Thomas Aquinas Outa.

Pump Installation
