

Tet Dlo Catchment System

The Tet Dlo catchment system - Funding from One Family International has made this project a reality. This water source had never been developed although water flowed from the spring continuously. Haiti Mission, Inc. was able to get the proper permits and work with the local governing body in order to protect and direct this wonderfully pure spring water. The community can now get potable water from a protected and continuous source as well as have ready access to a place to bathe, wash clothes and water animals.
