

Lot bo de Teren

Lot bo de Teren is a small community located on the sea side of the air strip in Numero Deux Haiti which serves the Jeremie region. These 30 or so families have to traverse the air strip to get water approximately a quarter of a mile away. Their access to this distant water is often hampered by air traffic or other security reasons. The burden of fetching water usually falls on the children which prevents them from studying and having much free time to play and be children. The water that they go to get can easily be contaminated by the distance and the nature of the fountain where it is gathered. This well will now give these families ready access to fresh, potable water near their huts and also greatly reduce the possibility of contamination. Thanks to [Ryan's Well Foundation](#) for sponsoring this much needed well.

“Success – potable water for another community!”
