

## **Well # 22 - Gommier**

**Gommier is a small community of about 400 people in the Northwest region of the Department de la Grande Anse of Haiti near the city of Roseaux. With funding from Kiwanis International, HMI was able to drill a well and install a hand pump to provide water to this village. The people had been in a particularly desperate situation, having to travel long distances to fetch water and with no assurances of the quality and safety once they reached a water source. This well will enable the families, especially the children of Gommier, to find safe potable water in close proximity to where they live.**
