

Well # 25 - Fanmi Bondye

The Fanmi Bondye well was a collaborative effort between HMI and [Ryan's Well Foundation](#). This well will greatly increase the availability of potable water for this high concentration of people in the community of Numero Deux. The other two sources of water for these families are approximately one mile in either direction from this well. This main road has become much more dangerous for children which were having to trek these long distances to fetch family water. This 125 foot deep well will supply an abundance of good, fresh water which will manifest itself in a much healthier environment. Another benefit will be to make the community safer by reducing the amount of walking traffic going for water on this busy route. As of March 2016, because of the much greater demand for water for the growing population, a submersible pump and reservoir tank was installed thanks to a grant by hands helping hands foundation of New Orleans Louisiana.
