

## **Well # 27 - Chateau II**

**The Chateau II well was drilled at the site of a new building outside of Jeremie in the Chateau community for the organization "La Cour Superieure des Comptes". The water at the site is good, potable water that was located at a depth of 360 feet. There is a large volume of water in this reservoir of almost 100 feet. The plans for the well are to install a submersible pump powered by generator.**
