

Well # 29 – Numero Deux

This well is a second well drilled in the compound at Fr. Joe's. The first well drilled in 2007 has done a wonderful job delivering unlimited water to the house and activities there as well as for several surrounding families. The needs have increased dramatically over the years as the compound has developed into more of a guest home and welcome center for people coming to work for HMI as well as UN personnel and other organizations. The pump in the original well has failed on several occasions, causing disruption in the daily activities as well as causing a critical situation to occur because of the lack of readily available potable water. With this past history in mind, the directors of HMI decided to drill a secondary well in June of 2013 to serve as a backup for the compound and to supply more water for the school and surrounding community. These funds were made available from the 2013 HMI fundraiser. Thanks to everyone who so generously participated in that event.
