

## **Well # 32 Jeremie Bridge**

**Well #32 was drilled by the bridge crossing the river going out of Jeremie for a private company that wants to build a service station/convenience store. HMI is always happy to work with private investors to develop water sources that will stimulate the economy and benefit local communities. Water was found at depths of 22 ft, 55 ft and 90 ft. The drill team drilled down to 110 ft and set the casing. This water source should last for many years supplying fresh, potable water for the business and surrounding neighborhood.**
