

Well # 37 - NGWA Ravine Sable # 2

The Ravine Sable community is a heavily populated area without an adequate water supply in close proximity to population densities. This well will be a tremendous aid to at least 500 people to find water more readily and in close proximity to their dwellings. This well was made possible by a grant from the National Ground Water Research Educational Foundation NGWA

Drill team - Louis Michel and Gary Bazard drilling with 20-W at Ravine Sable Well #2 Haiti June 2015

The Ravin Saab community is a heavily populated area without an adequate water supply in close proximity to population densities. This well will be a tremendous aid to at least 500 people to find water more readily and close to their dwellings. This well was made possible by a grant from the National Ground Water Research Educational Foundation [NGWA](#) and some friends of HMI.
