

Well # 38 - Matineau

Matineau is a remote community high in the mountain range above Ravin Saab. The people have had to walk great distances to fetch water at the source down below. During the rainy season, this source becomes contaminated because of the Matineau river overflowing into the source. The community of Matineau takes pride in its concern for the families there. Since they are so isolated, they find great solace and practical community living in caring for one another. There are at least 1000 people that will immediately benefit from this well. The road is very difficult and in some cases treacherous but the HMI drill team decided that it was possible to do this job considering the need was so great. God Bless everyone who helped make this possible.
